SUMMARY

Full Stack Engineer with 4+ years of experience developing large-scale fintech and enterprise applications for loan management and banking operations. Skilled in Angular, Java Spring Boot, Node.js, and microservice architectures, with expertise in workflow automation, RESTful API development, state management, and performance optimization. Experienced in building secure, scalable, and production-grade systems within Agile environments for financial domain applications.

TECHNICAL SKILLS

- **Frontend:** Angular (v19/20), React, HTML5, CSS3, Tailwind CSS, Bootstrap, Angular Material, jQuery
- **Backend:** Node.js (Express.js), Java (Spring Boot)
- **Database:** MySQL, MongoDB
- **Programming Languages:** JavaScript (ES6+), TypeScript, Java, Python
- **Cloud:** AWS S3, Google Cloud Platform (Cloud Storage)
- **Tools:** Git, Postman, VS Code, Jira

EXPERIENCE

- **GetVantage, Mumbai** July 2024 – Present
Software Development Engineer - I
 - Developed and maintained scalable enterprise applications using Angular (v19/20), NgRx, Angular Signals, Tailwind CSS, and Angular Material.
 - Designed and developed RESTful APIs and microservices using Node.js and Express, enabling seamless communication between frontend, backend, and distributed services while supporting a scalable loan management platform.
 - Independently built a complete frontend application from scratch using Angular 20, implementing routing, authentication flows, and report generation features.
 - Built and enhanced a CRM-based lead management module within a loan processing system, improving lead creation, tracking, and operational efficiency.
 - Designed and implemented Maker-Checker approval workflows that reduced manual validation errors and improved compliance within loan operations.
 - Integrated third-party REST APIs to securely push customer documents from the loan management system to partner NBFC platforms, automating the document submission process.
 - Optimized complex MongoDB aggregation pipelines, reducing report generation time by approximately 45% for high-volume operational datasets.
 - Built reusable Angular components, custom directives, and pipes, reducing code duplication and improving maintainability across multiple application modules.
 - Implemented cloud-based document storage using Amazon S3 and Google Cloud Storage, enabling secure, scalable file management across multiple business modules.
 - Collaborated with cross-functional teams in an Agile environment and used Git for version control and code management.
- **Tata Consultancy Services, Mumbai** June 2019 – June 2021
Developer, Reserve Bank of India CAS Team
 - Developed and maintained enterprise web applications for the Reserve Bank of India's CAS platform using Angular and Spring Boot, supporting internal banking operations.
 - Developed responsive Angular modules using Angular Material and Reactive Forms, improving usability for complex financial workflows.
 - Implemented advanced filtering, sorting, and data navigation for large financial datasets, improving usability for operational teams.
 - Designed and integrated RESTful APIs using Java Spring Boot to enable seamless communication between frontend applications and backend services.
 - Utilized Hibernate/JPA for ORM mapping and backend service development while ensuring efficient database interactions.
 - Wrote and optimized SQL queries, joins, and data validations to support business logic and backend processing.

- Implemented lazy loading and code splitting using Angular Router, improving application performance and reducing initial load time.
- Integrated NgRx for state management, enabling scalable handling of complex application state and reducing UI state-related issues.
- Developed reusable Angular services and dependency injection patterns to improve code modularity and maintainability.
- Collaborated with UI/UX designers, backend developers, and QA teams to deliver high-quality features in an Agile development environment.

PROJECTS

- **Book Sharing Website (Decentralized library)**

- Utilized React hooks such as useState, useEffect, and useContext to manage state and side effects efficiently, leading to improved application performance and cleaner code.
- Implemented global state management using Context API and Redux, which enhanced the application's performance and scalability by centralizing and streamlining state updates.
- Integrated Google Books API into the React app, enabling the retrieval of over 1 million books for users, ensuring a rich data source for the application.
- Designed UI/UX using Adobe XD and integrated Material-UI components, creating a modern, responsive, and visually appealing interface.
- Incorporated Axios for seamless integration of backend services, ensuring efficient data fetching and synchronization with the frontend.
- Collaborated with team members to develop and implement complex JavaScript features, promoting code quality and team efficiency.
- Implemented version control using Git and task management with Trello, facilitating effective collaboration and project tracking.
- Configured client-side routing using React Router, enabling seamless navigation and dynamic page rendering within a single-page application (SPA).

EDUCATION

- **Conestoga College, Canada** April 2023
Post Graduation Diploma in Web Development; GPA: 3.9/4.0
- **University Of Mumbai, India** May 2019
Bachelor of Engineering in Electronics & Telecommunication; GPA: 7.25/10
